SWASTICK CHOWDHURY

Data Platform Engineer | AI and ML Infrastructure | Python and PySpark
+91 877 770 3356 | chowdhuryswastick@gmail.com | Kolkata, India | Open to relocate | LinkedIn: linkedin.com/in/swastick-chowdhury-05a220a3 | GitHub: github.com/Swastickc

PROFESSIONAL SUMMARY

Data Platform Engineer with 6+ years of experience building production data platforms and AI infrastructure across Azure and GCP. Hands-on experience with Databricks, Unity Catalog, PySpark, SQL, Delta Lake, data governance, CI/CD, FinOps, and production AI. Delivered governance automation and cost visibility across 300+ workspaces and 10 metastore regions, alongside data migration, ETL, and database operations work. Open to international relocation.

CORE SKILLS

Databricks, Unity Catalog, Delta Lake, Delta Sharing, Apache Spark, PySpark, Python, SQL, ETL/ELT, CDC, batch and streaming pipelines, Lakeflow Jobs, Lakeview Dashboards, Databricks REST and Account APIs, Azure Data Factory, Synapse, Azure Key Vault, GCP, MLflow, model registry, LLM routing, data quality, RBAC, row-level security, FinOps, GitHub Actions, Docker, CI/CD, Power BI.

PROFESSIONAL EXPERIENCE

Senior Data Platform Engineer | Capgemini | March 2025-Present

- Built and governed a production multi-model AI platform using Llama and Claude Haiku, Sonnet, and Opus with complexity-based routing; registered the model through MLflow and Unity Catalog for versioned deployment and centralized access control.
- Developed a parallel query engine across 86 SQL tools and 13 data categories, reducing query latency by 4x compared with sequential execution across 86 tools; enforced a hybrid identity model for 44 sensitive tools under user OAuth and 42 standard tools under a service principal.
- Designed and maintained CDC pipelines on Delta Lake for continuous ingestion and timely analytics, and built data-quality and cost-monitoring pipelines using Databricks System Tables and Account APIs.
- Automated identity synchronization, workspace-to-metastore assignment, stale-grant cleanup, and tenant-wide governance across 300+ Azure Databricks workspaces and 10 metastore regions; built region-specific onboarding with no manual assignment steps.
- Built cross-metastore tag collection ETL and governance dashboards; granted governed-tag permissions across 3,309+ users with a rollback path for overly broad access.
- Delivered AI and Databricks FinOps dashboards for user, product, SKU, workspace, and monthly cost trends, with row-level security for administrator access and scheduled daily refreshes.

Senior Data Platform Engineer (continued) | Capgemini | March 2025-Present

- Automated Delta Sharing and Marketplace recipient cleanup; identified and revoked 216 recipients inactive for more than 90 days while managing share quota limits.
- Automated workspace and Excel add-in manifest synchronization; preserved audit logs with retention checks, backed up clean-room events, and maintained query-history reporting for platform operations.
- Investigated a production query-history access failure caused by a platform column-masking regression, documented the incident, and escalated it to the platform provider.

Data Engineer | Tredence | May 2024-February 2025

- Automated ETL across Bronze, Silver, and Gold layers for Procter & Gamble using Databricks Workflows and modernized notebooks into Databricks Asset Bundles-compatible infrastructure as code in Docker-based environments.
- Built GitHub CI/CD checks for Python formatting, YAML validation, and service-principal credential management, reducing deployment errors to zero; used Azure Key Vault authentication.

Technical Consultant - Data Engineering | PwC | July 2022-May 2024

- Built GCP migration pipelines for Dr. Reddy's production data from on-premises MySQL using Azure Data Factory and PySpark on Databricks, with large-scale transformation, validation, and cleansing.
- Led West Australia Government migration and quality remediation across three data entities into a consolidated master dataset; built SQL procedures for deduplication and transformation and connected Synapse Analytics with Power BI.

Azure SQL Support Engineer | Mindtree | February 2020-July 2022

- Resolved Azure SQL Database and Managed Instance issues for enterprise clients through systematic debugging, root-cause analysis, and code correction.
- Migrated databases to Azure PaaS and IaaS using BACPAC, transaction replication, and backup/restore; automated integrity checks, index maintenance, and backup scheduling.

SELECTED PERSONAL PROJECT

Personal Finance Tracker | Independent Project | 2026

- Built and deployed a full-stack application using Next.js, Cloudflare Workers, Cloudflare D1, and Google Sheets, with session-based authentication and a canonical transaction schema.
- Developed Gmail, SMS, and bank-statement transaction ingestion, reconciliation, rule-based and AI-assisted categorization, and data-quality dashboards; created six GitHub Actions workflows for unattended batch processing and repair, reducing an approximately 992-item backlog to approximately 560 items without manual processing.

EDUCATION AND CERTIFICATION

B.Tech in Computer Science, CGPA 7.6 | West Bengal University of Technology | 2015-2019

Microsoft Azure for Data Engineering | Coursera | May 2023
